

Impact prevention systems for indoor and outdoor use

IMPACT PREVENTION SYSTEMS FOR OUTDOOR USE

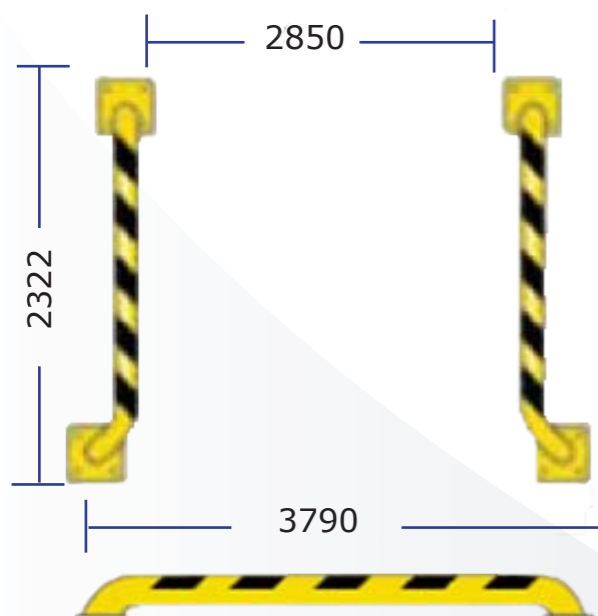

Repairs to damaged structures can be expensive.

PolySto's impact prevention systems protect your fixed and movable assets using technically advanced and aesthetically attractive solutions.

The surfaces of all our safety devices are rust-proof and finished in special weather resistant paints. High-reflection colours ensure maximum visibility even at night. And stability is guaranteed by robust anchoring systems.

GCA 168

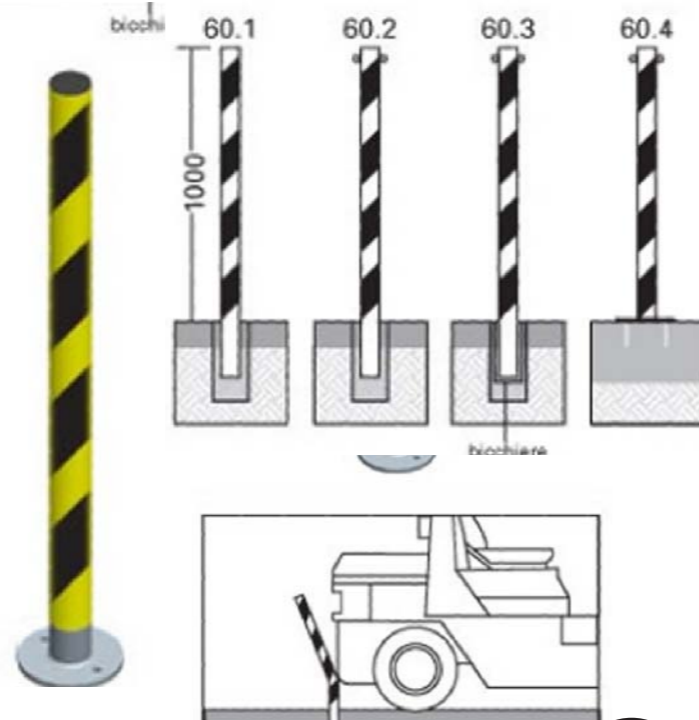

These products conform to mandatory standards, and provide attractive and stylish protection for outdoor areas. Finish can be customised if required.

IMPACT PREVENTION SYSTEMS FOR INDOOR USE

Damage is easy enough to avoid.

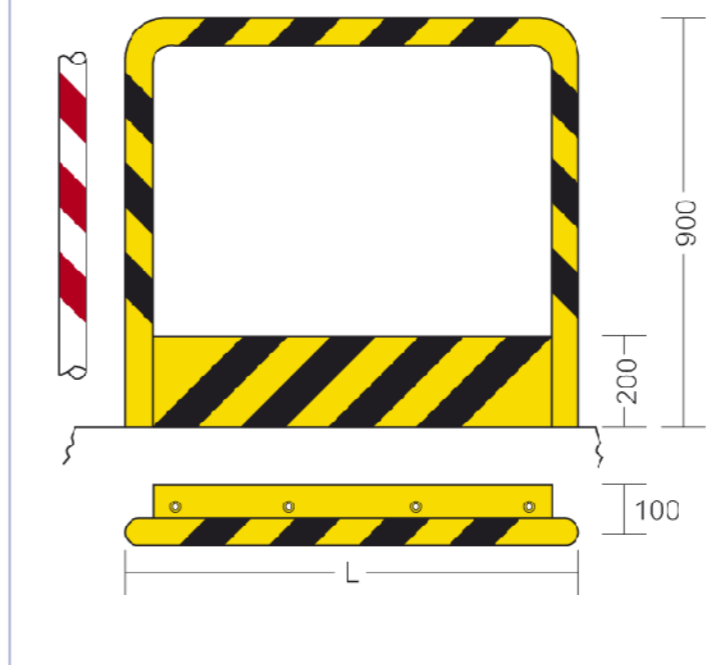

PolySto can protect your indoor environments against damage during everyday operations. We can supply specially designed safety barriers for buildings, plant, automatic doors, and all other important assets.

Customers can rely on EEC certified, industrial (i.e. series produced) quality, but can still choose special and customised finishes to suit specific logistic or stylistic requirements.

The main characteristics of the PolySto products

SAFETY

Rounded designs with no sharp edges avoid accidental injury and conform to standards governing health and safety at work

ROBUST

All our products boast compact designs and are made entirely in steel.

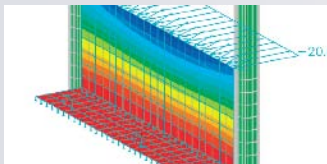

VISIBILITY

High visibility finish avoids accidental impacts and conforms to EEC Directive 92/58.

SERIES PRODUCED

Uniformity of characteristics is guaranteed over time.

STATIC LOAD TESTING

All products are tested to the strictest criteria.

MODULAR

Our products can be combined in various ways, and flexibly positioned to fulfil specific requirements.

SPECIAL ANCHORING SYSTEMS

Nothing is left to chance. All our products incorporate carefully selected, special high strength, chemical anchoring systems.

TOP QUALITY FINISH

Rust-proofed and finished in a polyester powder coating, all surfaces are perfectly smooth and weld-free.
